The South Bay Community Emergency Response Team (CERT) consists of a group of volunteers based in the South Bay who provide assistance to animals and local agencies by helping with sheltering needs during a natural or human-caused disaster.

Their goal is to reunite animals with their families in the aftermath of an emergency and provide assistance to affected animals.

CERT Group Leader
Johnny Hernandez

Group leader, Johnny Hernandez, along with other group members of CERT, will explain to us about their rescue and sheltering operations. They will share ways the South Bay Bird Society can work together with them in times of disaster to best take care of our feathered friends and other pets. Through our cooperation, we can be better prepared for any future emergencies in our community.

So, plan to come to the meeting and we will learn ways we can work together when a disaster strikes!

Location: Kiwanis Club of Hermosa Beach
2515 Valley Drive, Hermosa Beach, (Cross streets are Gould & Valley)

No BIRDS ALLOWED at the June MEETING due to a NEWCASTLE Disease Outbreak.

Chan the Birdman of San Fran!
May 6, 2019  By Diane Sivas

How much fun was the May meeting?!! If it wasn’t for the Newcastle virus outbreak, we might have had macaws flying all over the room but, sadly, they had to stay home. Not to worry, though, Chan was a hit even without his cast of bird characters.

We had a good crowd and while folks were grabbing some food and settling in, we had the Early Bird drawing, won by Lori Kendall. Janet coaxed out the guests that were in attendance and put the spotlight on them. There were a couple of May birthdays (Elaine and Oliver), so we had to fire up the vocal cords and sing for them. Newcastle is apparently getting more widespread, so everyone should be cautious about taking birds too far from home. Karen Allen reminded us that, in the event of a visit from USDA, we are not obligated to let them into our homes. Just say no to that. Janet announced upcoming programs, starting with our June 9 afternoon meeting when the CERT (Community Emergency Response Team) folks will be our speakers. These guys are always in need of supplies, so if you have anything they might be able to use, bring it to the meeting. Just a reminder, too, that we will not have a meeting in July. Finally, Gala tried to stump the crowd with newsletter questions, but it seems that more people are reading it. Remember, you’ll win raffle tickets if you can answer her questions.

With business out of the way, Janet introduced Chan Quach. He started off with his “teacher” voice and launched into his “intro course.” Chan grew up on a farm and began working with birds when he was in College. He attended U.C. Santa Cruz, eventually moving and settling in San Francisco. (He currently resides in LA.) He talked about the 325 square foot apartment he shared with two macaws, a tortoise, dogs, a snake and a chameleon. He proved it with pictures and told us how everyone learned to coexist. The snake had a place, the dogs had a space, and the macaws had their space, and everyone lived in harmony. They even all sleep together – with him! Impressive.

(“Chan” continued on Page 3)
His birds are all free fliers. He uses harnesses but showed us video of them flying free and then returning to his arm. There’s a learning curve, of course, and he later told us that he uses “modeling” techniques to teach the youngsters. If one of the babies tries to bite, even playfully, he does not pull away. If one is screaming, he ignores it, turns his back, and pays attention to those who are quiet. That way they learn that they will not get attention if they’re screaming. Attention is given when they’re quiet. And speaking of quiet, macaws and a 325 sq. foot apartment can be a nightmare for neighbors. He combats this by communicating and educating neighbors and inviting them in to meet the birds. The biggest challenge he faces is a screaming Hyacinth macaw, but he lives by the motto that they won’t scream if we don’t yell at them. When they start screaming, he said, just don’t show up. If they scream when you do show up, walk away.

Sunshine is his youngest Hyacinth. He trains her alone, out of the view of the others. He is always close by so she feels secure, but encourages her to play on her own and practice independence. He wants her to learn that she doesn’t always need to be on him.

The last part of the program was a discussion about things that prevent birds from securing a “forever” home. Aggression, territorial behavior, excessive screaming, generalized mess and destruction of property are a few of the issues that came up from our members and guests. Parrots are challenging pets to be sure, but Chan takes on the challenge with patience and is living proof that just about any kind of behavior can be resolved. Even with snakes and furry animals around!

Chan presented us with a lot of food for thought. I’m guessing that we’d all like to be a little more like him. His patience is impressive and his love for his animals is clear. Hopefully, we’ll be able to have him back, with his birds, after the Newcastle problem is behind us.

Remember that next month we will have a visit from the CERT crew. This will be another informative meeting. You can never be too prepared. Sunday afternoon, June 9 is the day. Check page one of the newsletter for more details.
Rain, hail, lightning and thunder hit the South Bay this past May 22nd. The lifeguards closed the beaches for a time. Everyone was asked to get out of the water and leave the beach.

I am sure the flowers, bushes, grass and trees will be richer in color and greener for Memorial Day. This special day serves as a remembrance of those that have died in military service for the United States!

**REMINDER:**

**Our Next Meeting is**

SUNDAY, JUNE 9th, from 2-4 PM

The South Bay Animal Emergency and Disaster Team (CERT) will be our speakers.

If you love animals, you will want to attend this meeting. Johnny Hernandez will show a power-point presentation about their mission. Being prepared before the emergency or disaster is our first line of defense. The representatives of CERT will provide us information and an understanding of what they do so we can better coordinate with them in the event of an emergency.

**SUSPENDING MOST COMMUNITY OUTREACH EVENTS**

Due to Virulent Newcastle’s Disease, we will be suspending our community outreach events with our birds until the disease (being found in poultry farms) has been eradicated! This means no new cases of VND can be discovered in poultry farms for four months.

As a safety reminder, no birds are allowed at SBBS meetings.

**LOOKING BACK & AHEAD:**

Reflecting on the MAY 6th meeting with Chan Quach, Bird Behaviorist

Chan gave us an outstanding professional video and slide presentation on tips to improve our birds’ behavior. SBBS will welcome Chan to come back again soon to share even more methods of working with our feathered friends.

SBBS ANNUAL PICNIC IN THE PARK, 12 noon - 3 PM

SUNDAY, SEPTEMBER 8TH

COLUMBIA PARK IN TORRANCE

“MARGARITAVILLE— We are the Original Parrot Heads!”

Details including a map and flyer to follow

SBBS MEMBERS GET THE MONTHLY NEWSLETTER SENT DIRECTLY TO THEIR E-MAIL!

I look forward to seeing you on Sunday, June 9th at 2 PM!

Cheers, Janet
Laugh Kookaburra:

Oh..."This guy is falling." I totally misunderstood what she was saying.

We too.

Happy Father’s Day

Ron Ellwood and his dog, Lilly Fern

Mike Luther and his Pineapple Conure

Scott Byington and his Blue & Gold Macaw

Paul Carreiro and his Cockatoo, Shasta

Cartoons Submitted by June Baker & Marie Collejo

Thank you to those submitting cartoons to share. If yours hasn’t been included in the newsletters yet, they will be included in a future issue.
Do you attend the monthly SBBS meetings and arrive early? If so, the club could use your help.

Please consider “stepping-up” to ARRANGE the food and beverages on the tables near the kitchen for our **monthly potluck**. If this something you are interested is assisting with or overseeing, please contact the president, Janet Ragonesi at (310) 376-5954. Thank you.

You could **WIN A PRIZE** by helping to clean-up after the monthly meeting. Those who stay around a few extra minutes to lend a hand to help take down tables, put away chairs, sweep the floor, wipe-down dirtied tables or counters, put items for home in cars, etc. will be considered to be the randomly chosen person to **WIN A PRIZE**. When we all pitch in, the clean-up goes much quicker and easier. THANK YOU!

**The MAY WINNER was MICHAEL LUTHER**

**BIRDING** coordinated with the PV Peninsula Land Conservancy, Madrona Marsh, the Ballona Wetlands and more led by Bob Shanman from Wild Bird Unlimited

- **When**: June 12 (2nd Wednesday), 8:00 am  
  **Where**: MADRONA MARCH

- **When**: June 19 (3rd Wednesday), 8:30 am  
  **Where**: WHITE POINT NATURE PRESERVE  
  1600 Paseo Del Mar, San Pedro, CA

- **When**: May 22 & June 26 (4th Wednesday), 8:30 am  
  **Where**: GEORGE F. CANYON  
  27305 Palos Verdes Drive East, Rolling Hills Estates, CA

**Other BIRDING locations:**

- Where: BALLONA WETLANDS, KM HARBOR PARK, BIXBY MARSH

(See “Events” on Wild Birds Unlimited web site: wbu.com for more info.)

**Palos Verdes Peninsula Land Conservancy**

RSVP: at pvplc.org, select “Events & Activities”

Q & A  By Karen, the Parrot Lady

The answers to your questions are MY opinion based on nearly 50 years experience. I donated my time to Avian and Exotic Animal Hospital, working with Doctors Rosskopf and Woerpel. I have hands-on experience owning my own Exotic bird shops, raising and breeding, grooming and caring for parrots of all kinds.

Ask me your questions and I will answer to the best of my knowledge. If I don’t have an answer I will make every effort to find one for you and tell you my source.

Here we go!!!!!

Q  What will happen to my bird if something happens to me?

A  First, you need to have a will or a trust. Get a professional to help you do it properly. Name the person in that document that you trust to take your feathery friend, BUT FIRST, check with that person to make sure it is OKAY. (Do not spring this on someone. This would not be a birthday or Christmas surprise that will thrill someone. Your bird needs to go to a person that will love and care for him as you have!!!).

Q  My bird, dog and cat all sleep together. Is that alright?

A  In your case it might be, but generally speaking, it is dangerous for the bird. Depending on the size of the dog, it could roll over on the bird. I get the same question about people sleeping with their bird, and I give them the same answer. The bird's beak is very strong, the cat's nails are very sharp, and a playful dog does not always know his own strength.....I could go on for days, but you get the idea!

("Q & A" continued on page 9)
I love to take my bird for walks. Any safety suggestions?

You can use a harness, a birdie leash, or a carrier. Your bird may stay on your shoulder, however, someone’s dog can jump on you, and you would lose control. The same thing happens when the idiot in the Mac truck decides to honk at you to get the bird’s attention. If you do not have the wings clipped, wave bye-bye to your bird. Always lean on the side of caution and be safe!!!

I want to buy an Amazon Parrot. There were two, and one came right to me, but the other one is prettier. What would you do?

My rule is: always let the bird choose you. ALWAYS! If you are buying a bird to match your furniture, GET A STUFFED ONE. If you are buying a bird for its prettiness, GET A STUFFED ONE. If you are buying a bird for decoration, GET A STUFFED ONE. If you are looking for a loving family member that will bring you nothing but joy, get the one that PICKED YOU!

My bird makes gas-passing noises any time anyone sits down near her. How can I correct this?

Oh, Good Grief! You are up that well-known creek without a paddle. Of course, everyone laughs, and that kind of attention is so much fun that there is no stopping it. Ignore it, and it might go away, but don’t hold your breath in the process!

See you at the next meeting on June 9th.

Karen, The Parrot Lady

Karen Allen has been involved with birds and a SBBS member for over 35 years. She is a lifetime member of SBBS. Karen owns her own bird shop, “Birds & More” located at 4301 Redondo Beach Blvd., Lawndale, CA. The phone number is: (310) 370-7550. She counsels and trains new bird owners and is a published writer.

Send your questions for “The Parrot Lady” to:
Karen Allen, P. O. Box 3863
Redondo Beach, CA 90277-3863
Email: Birdsnmor@aol.com
(Editor’s Note: Dr. Irene Pepperberg has spoken multiple times over the years to the SBBS membership. The club has helped to sponsor her research with African Grey parrots as it relates to childhood cognitive behavior.)

Inside Pepperberg’s Lab: Mutual Exclusivity in Parrots—A Special Case of Inference

Posted on February 13, 2019
By: Irene Pepperberg, Ph.D.

In previous blogs I’ve talked about the importance of using “inference by exclusion” (inferring where something can be found after being given information about where it is absent) for examining nonhuman cognition. Many species succeed at the task at some level, but only a few exhibit a very special case of this behavior involving symbolic communication—something called **Mutual exclusivity (ME)**. Interestingly, African Grey Griffin demonstrated something very much like ME when initially learning his labels.

The term was first coined by Markman (Markman & Wachtel, 1988), but was previously studied by Carey (1978) under the term **fast mapping**, in experiments to determine how children acquired their early labels. The task is something like the following: A child is shown two toys that s/he can label (e.g., a ball and a block) along with one novel object (e.g., a cherry pitter). The child is asked to give the experimenter the “dax.” Now, the child knows that neither the ball nor the block is ever called a “dax,” so, **by exclusion**, s/he picks up the novel item, and thereby maps the novel label to the novel object. Shusterman (Shusterman & Krieger, 1984) used a similar strategy to teach sea lions new labels for new objects.

Of course, the extent of mapping is dependent upon context—if a subject is given several of these trials at once, with several new labels (e.g., “dax,” “glif,” “nep”), and then given all of the novel objects at once and then asked to choose the “dax,” the mapping often isn’t as good as if the original trial is repeated several times; that is, with only one novel object-novel label connection. **However, learning with exclusion is often faster than simple pairing of label and object, and is therefore thought to help children expand their vocabulary.**

ME also seems to help children eventually learn category labels and labels for attributes of objects—but not in their early stages of acquisition. Interestingly, **children often have a very difficult time learning that a specific object can have two labels**—here, they initially take ME too far, believing not only that every object has a name, but also only one name. So, for example, they happily label the family pet as a “doggie,” but will vehemently state, **“No animal...doggie!”**, excluding the second novel label. Obviously, at some point, they override this aspect of ME, because all normal children learn lots of labels for each of their objects. And, at that point, **ME will then help them learn new attribute labels**—e.g., novel colors.

So, when given a yellow block, a blue block, and a vibrant pink block, and asked to give the experimenter the “fuchsia” one, few of them hesitate in their choice...not only do they know that all of the objects are blocks; they also know the referents for yellow and blue, and thus use ME to infer that the novel vocalization had to refer to the color label for the novel attribute. Furthermore, if later asked if “fuchsia” is a color, shape or material, they say it is a color.

(Pepperberg article continued on page 11)
So, how does Griffin fit into all of this? Well, this label training differed a bit from that of Alex, the African Grey. When I started working with Alex in 1977, I didn’t know anything about ME. (It was just beginning to be studied in children), but I figured that if I wanted him to learn object labels, I’d best start with items that had very few other attributes, such as color and shape. So, for example, “paper” referred to pieces of a white index card, “wood” to uncolored tongue depressors, and “hide” to amorphously shaped pieces of rawhide. **He had no problem learning these labels.**

When it came time to teach color labels, I dyed several objects with one shade of food color, and then we modeled “What color?” with responses of “green paper,” “green wood,” so that the attribute—the color green—was an additional label rather than a second, separate label, and that two items with different object labels had only that one particular novel attribute in common. Again, **Alex had no trouble learning color labels and, in the same way shape labels** (Pepperberg, 1981, 1983). By the time Griffin came on the scene, however, all the various objects in the lab came in all sorts of colors and shapes, and we decided to see if that made any difference when teaching him his labels.

Therefore, **Griffin learned labels for objects by seeing several differently colored versions of the same item**—e.g., green, blue, yellow wooden sticks or pompons and humans responding to the questions “What matter?” appropriately. He was able to infer that, because the various groups of wood or wool and different color, but common material attributes—those materials were called “wood” or “wool.” And when we taught him color labels for a group of variously colored but otherwise identical cups, he also learned to respond to “What color?” with those color labels. So far, no problem. But what would happen when we tried to get him to learn attribute labels not as additional, but as alternate labels, for the various items he could already label? Specifically, what would happen if we showed him a woolen pompon and asked, “What color?” instead of the usual “What Matter?”

**ME then came into play:** Indeed, when asked “What color?” for an item for which he already had a label (“wool”), he at first ignored the query, rejected the color label, and responded “wool” (Pepperberg & Wilcox, 2001) even though he know the appropriate color label! And he simply wouldn’t learn the label “cup!” Just like the your children who initially used ME to exclude “animal” for a dog, it took months of training to get Griffin to understand that an object could be both “green” and “wool,” or “blue” and “wood”—and likewise with shape and novel object labels.

Eventually, of course, Griffin, again like children, fully understood how objects could be categorized with respect to various different attributes and now is as competent as was Alex with respect to labeling all these attributes (Pepperberg & Nakayama, 2016), and better than even 5-year-old children on physical tasks of inference by exclusion (Pepperberg et al., 2018). However, it was quite exciting to find that the path of label acquisition, including ME, could be so similar for species that are so evolutionarily distant!
SBBS Welcomes New & Returning Members

RENEWALS: Mike Luther, Jon & Irene Templeton, Fernand Bournival, Len Vanderoof, Kathy Powell

LIFETIME MEMBERS: Diane Bock, Cary & Anita Pao, Jimi K. Anderson, Karen Allen, Ron & Perry Ellwood, Dr. Roskopf, Jack Ford, Janet Ragonesi, Bree & Deven Brozey

Number of Current Members: 76

Don’t fly off the membership list!
Please pay your dues.

Your dues help support your club by providing educational programs, newsletters, the website, beverages and more.

SBBS is currently upgrading our membership files. To help us, please go to www.sobaybirdsoc.com and click on “Membership” to find a membership application. Please fill it out and include your check and send it to SBBS, P.O. Box 3863, Redondo Beach, CA 90277-3863.

If you want to join and have received a hard copy or found the membership application on the back of the newsletter, fill it out and send it to the above address. If you have any questions about your membership, please contact Membership Director, Ron Ellwood (310) 850-0594.

The deadline for the next newsletter is Friday, June 14

Thank you, Gala Burkholder

HELP WANTED

Myrna Frame, of Fine Feathered Friends Foundation, is looking to hire a person with experience working with all sizes of birds to help care for birds one day a week.

If you are interested, contact Myrna at (310) 613-9549 or curtismyrna@verizon.net.
Support our sponsors.

SBBS members get a 10% discount from Birds & More and Animal Lovers.

The South Bay is fortunate to have great avian veterinarians for our feathered friends.

The South Bay Bird Society by giving them your business.

Upon review and acceptance by the board of directors, any business that donates $25 or more per month in either goods, gift certificates or money to SBBS will be known as a SBBS Sponsor. For each month, a sponsor donates to SBBS, the sponsor will be listed in the newsletter for that month depending upon the timing for publication. These sponsors are listed above. LET’S GIVE THEM OUR SUPPORT.
PLEASE JOIN US

Meetings are held at the Kiwanis Club of Hermosa Beach
2515 Valley Drive, Hermosa Beach, CA 90245 (near the corner of Gould and Valley Drive)

Most meetings are held on the 1st Monday of the month at 7:00 pm. *

* Sometimes, special meetings are held instead on Sunday afternoons, but verify the meeting date by checking the website at: www.sobaybirdsoc.com.

You don’t have to own a bird to attend. You are invited to bring a dish to share at our potluck which is followed by a speaker and a raffle.

Members are invited to attend Board Meetings which are usually the 2nd Monday of the month. Call Janet for details and to RSVP.
